

diatec Autodesk BIM 360 Glue Fundamentals

1 Day Course

> Objective of the Course

BIM 360 Glue is a cloud-based BIM management and collaboration product; it connects the entire project team and streamlines project workflows from pre-construction through construction execution. With anywhere, anytime access to the most recent project information throughout the project lifecycle, BIM 360 Glue helps review projects and resolve coordination issues faster, while advancing the construction layout process.

> Agenda

This course covers the fundamental aspects of BIM 360 Glue. Setting up a project, defining access and roles and responsibilities, we then move to how information is uploaded to the project, models are merged. Closing off by looking at mark-up, views and clashing.

BIM 360 Glue Introduction

- BIM 360 Glue Basics and Overview
- Integration with other Autodesk Products
- BIM 360 Glue Project Setup

Working with Glue - Web and Desktop

- Setting up Models and Drawings for Use
- Viewing and Navigating Merged Models (Web & Desktop Version)
- Coordination with BIM 360 Glue

Working with Glue - Mobile Application

- Overview of Mobile Application
- Working with Projects
- Modelling Tools

> Who Should Attend?

Professionals involved or interested in BIM in relation to Construction or Model Management or those responsible for Informational delivery on Projects.

> Prerequisites

Previous experience around Design and Construction projects in relation to information coordination and 3d Modelling. Experience with web and Mobile tablet technology is recommended but not essential.
